Multidisciplinary Artist · Designer · Creative Technologist

ARTIST PROFILE

I have been making art since I was 11, when I picked up a pencil and began drawing stories. That instinct to build worlds through images has grown into a multidisciplinary practice spanning independent illustration, visual design, fashion, interaction, games, and creative technology. My work moves between physical and digital forms, using research, experimentation, storytelling, and code as ways of making. I am especially interested in the space where art and technology meet, and in how emerging tools can create new forms of expression, interaction, and human experience.

SELECTED DESIGN & CREATIVE WORK

Independent Creative Artist · Illustrator & Freelance Artist
- Built an independent creative practice around original illustration and drawing, developing artwork for physical prints and direct sale.
- Produced and sold illustration prints at conventions through my own freelance business, taking work from concept and image-making through production, presentation, and customer interaction.

Opal · Product Designer & Developer | Independent Project
- Explored how meeting information could become a visual system for collaboration; designed information architecture, interaction flows, and a visual system in Figma, then built a functional Next.js prototype.

PulseFit · UX/UI Lead | Independent Project
- Investigated fitness and nutrition tools through 5 user interviews, competitive research, card sorting, usability testing, information architecture, high-fidelity UI, and interactive prototyping.

Path Learning · UX / Product Designer | Independent Project
- Explored project-based digital learning centered on adaptive skill progression and AI-assisted feedback; developed personas, product structure, user flows, interaction patterns, and desktop/mobile concepts.

CREATIVE TECHNOLOGY PROJECTS

Creative AI Writing Platform · Designer & Developer
- Built an experimental writing web app using the OpenAI API, GPT-3.5, Stable Diffusion, Python/Flask, and HTML/CSS to explore generative text and imagery as creative media.

Cyber Runner · Designer & Developer
- Created and shipped a cyberpunk 2D infinite-runner game in Unity/C# in under 12 hours, owning visual direction, original game art in Illustrator and PixilArt, gameplay, implementation, and release on Itch.io.

PROFESSIONAL PRACTICE

Yuugen · Founder & Designer | Independent Apparel Brand · 2020-2021
- Founded an apparel brand spanning illustration, visual identity, product design, production, and digital commerce; created original artwork in Procreate and Illustrator and translated concepts into garments and brand experiences.
- Researched customers and markets, developed samples with suppliers, iterated through feedback, and grew the project to 1,000+ online sales through Shopify, Etsy, and Instagram, alongside in-person sales events and conventions.

Meta · Software Engineer | 2024-Present
- Worked across engineering, product, design, and data science to develop and experiment with consumer technology; built a 0-to-1 Messenger Stories experience across backend and iOS.
- Led improvements to org-wide A/B testing by building internal tooling, dashboards, and documentation to streamline experimentation and product decision-making.

Finary · Full-Stack Software Engineer | 2023
- Worked on an early team of six building a social investing platform; designed and developed market-news, discussion, and ticker-tagging experiences across React, React Native, Django, and Firebase, contributing to 22% user acquisition growth over three months.
- Monitored, debugged, and iterated across frontend, backend APIs, and Firebase database integrations in a fast-moving product environment.

Microsoft · Xbox · Software Engineer | 2020-2023
- Built consumer experiences across Search, Cloud Gaming, Home, Collections, and accessibility; collaborated with product and design from scoping through launch on a redesigned Search experience associated with a 30% increase in engagement and retention.
- Developed and iterated on customer-facing Xbox experiences for 120M monthly users using C#, C++, XAML, and MVVM across product areas including Cloud Gaming, Search, Home/Collection, memory management, and accessibility.
